Handy Software Lab Releases HSLAB Print Logger 5 Family products
Lower your printing expenses by setting quotas for printing!

HSLAB Print Logger 5 is a handy real-time printing monitoring and statistics analysis software application for print servers, which are used ubiquitously in any industry. Basically, with HSLAB monitoring system administrators always know about printing statistics on one or more print servers.

Handy Software Lab has released v 5 of HSLAB Print Logger Family products (Free edition, Personal edition, SOHO edition, Small business edition, Standard edition, Enterprise edition), a Windows 2000/XP/2003/Vista/2008 software that logs and limiting all printing activity on a network print server.

HSLAB Print Logger monitors the set of a print jobs parameters and records detailed information into embedded or external(remote) SQL database. This information lets you operate your charges, limit use of printers by your employees, receive detailed (including graphic) information about all print jobs.

Software designed as a native Windows 2000/XP/2003/Vista/2008 service, and also includes a separate applications to configure and control the service and remote reporting utility. You can easily export reports in MS Excel, HTML, XML and CSV formats. Also you can see real-time statistics in HTML format from embedded HTTP server using your favorite web browser or receive scheduled reports via email.

HSLAB Print Logger stores its data in the SQL database. This format lets you access the database records and build custom reports using any SQL clients or integrate print jobs information into your corporate information system.

HSLAB Print Logger costs starts from 60 EUR for one print server. Number of users is unlimited. Orders may be completed online at www.printlogger.com. Demo version is also available.

Free evaluation copy available. (<http://www.printlogger.com/downloads/hslab-print-logger-5-ee.exe>)
